

Narrow Beam 7 Cell Cluster Optic - Part No. 261

- Designed for low profile, high power, Lambertian LEDs
- High light collection efficiency of >85%
- Precision moulded in optical grade Polycarbonate for thermal stability and system durability
- Part of the Polymer Optics "Modular LED Optics"[®] range

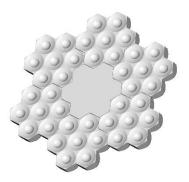

Polymer Optics "Modular LED Optics"[®] design, based on a hexagonal format, allows maximum packing density and assembly flexibility

Polymer Optics "Cluster Optic"[®] arrays can be assembled together in a number of ways to meet the needs of a range of illumination applications

The 261, 262 and 264 type "Cluster Optics"[®] can be mixed in the assembly to optimise the systems illumination distribution, and combined with other Polymer Optics custom cluster designs. Typical dimensional tolerances to +/-0.2mm

In order to determine if the particular beam properties and performance of this optic are suitable for your application with your chosen LED type, POL suggests that you obtain samples from POL or their distributors for your own product testing, as properties may vary with different LED types.

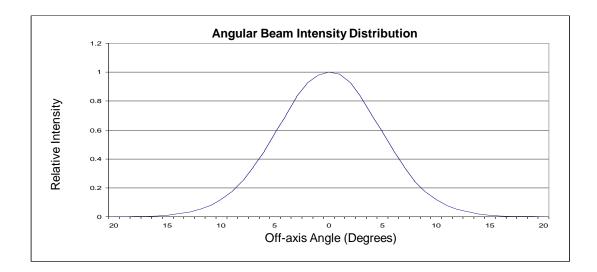

Due to continuous product improvement, POL reserve the right to change specifications without notice.

Narrow Beam 7 Cell Cluster Optic - Part No. 261

Typical peak illuminace with 7x100 lumen Lambertian, 1mm die size LEDs = 14cd/lumen			
Range	0.5m	1m	2m
Illuminance	39200 lux	9800 lux	2450 lux

In order to determine if the particular beam properties and performance of this optic are suitable for your application with your chosen LED type, POL suggests that you obtain samples from POL or their distributors for your own product testing, as properties may vary with different LED types.
