TEXAS INSTRUMENTS

SNx4AHCT245 Octal Bus Transceivers With 3-State Outputs

1 Features

- Inputs are TTL-voltage compatible
- Latch-up performance exceeds 250 mA per JESD 17
- ESD protection exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)
- On products compliant to MIL-PRF-38535, All parameters are tested unless otherwise noted. On all other products, production processing does not necessarily include testing of all parameters.

2 Applications

- Enable or disable a digital signal
- Hold a signal during a controller reset
- Debounce a switch

3 Description

The SNx4AHCT245 octal bus transceivers are designed for asynchronous two-way communication between data buses. These parts operate from 4.5 V to 5.5 V.

Package Information[1]

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN54AHCT245	J (CDIP, 20)	24.2 mm × 6.92 mm
	W (CFP, 20)	13.09 mm × 6.92 mm
	FK (LCCC, 20)	8.89 mm × 8.89 mm
SN74AHCT245	RGY (VQFN, 20)	4.50 mm × 3.50 mm
	N (PDIP, 20)	25.40 mm × 6.35 mm
	NS (SOP, 20)	12.60 mm × 5.30 mm
	DB (SSOP (20)	7.50 mm × 5.30 mm
	DGV (TVSOP, 20)	5.00 mm × 4.40 mm
	DW (SOIC, 20)	12.80 mm × 7.50 mm
	PW (TSSOP, 20)	6.50 mm × 4.40 mm
	RKS (VQFN, 20)	4.50 mm × 2.50 mm
	DGS (VSSOP, 20)	5.10 mm × 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision Q (December 2022) to Revision R (April 2023)	**Page**
• Updated the Applications section...	1
• Added DGS package information to the Package Information table, Pin Configuration and Functions, and Thermal Information..	1
• Updated the Package Information table..	1

Changes from Revision P (July 2014) to Revision Q (December 2022)	**Page**
• Added RKS package information to the Package Information table, Pin Configuration and Functions, and Thermal Information..	1

Changes from Revision O (August 2013) to Revision P (July 2014)	**Page**
• Updated document to new TI data sheet format...	1
• Added Military Disclaimer to Features list.	1
• Added Applications...	1
• Added Pin Functions table.	3
• Added Handling Ratings table...	4
• Added Thermal Information table..	5
• Added Typical Characteristics...	7
• Added Application and Implementation section...	10

| **Changes from Revision N (March 2005) to Revision O (August 2013)**	**Page**
• Removed Ordering Information table..	1
• Extended operating temperature range to 125°C...	4

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[1]

				MIN	MAX	UNIT
V_{CC}	Supply voltage range			−0.5	7	V
V_I	Input voltage range[2]		Control inputs	−0.5	7	V
V_O	Output voltage range[2]			−0.5	V_{CC} + 0.5	V
I_{IK}	Input clamp current	$V_I < 0$	Control inputs		−20	mA
I_{OK}	Output clamp current	$V_O < 0$ or $V_O > V_{CC}$			±20	mA
I_O	Continuous output current	V_O = 0 to V_{CC}			±25	mA
	Continuous current through V_{CC} or GND				±75	mA

(1) Operation outside the *Absolute Maximum Rating* may cause permanent device damage. *Absolute Maximum Rating* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Condition*. If used outside the *Recommended Operating Condition* but within the *Absolute Maximum Rating*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
(2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

6.2 Handling Ratings

			MIN	MAX	UNIT
T_{stg}	Storage temperature range		−65	150	°C
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001[1]	0	2000	V
		Charged-device model (CDM), per ANSI/ESDA/JEDEC JS-002[2]	0	1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)[1]

		SN54AHCT245		SN74AHCT245		UNIT
		MIN	MAX	MIN	MAX	
V_{CC}	Supply voltage	4.5	5.5	4.5	5.5	V
V_{IH}	High-level input voltage	2		2		V
V_{IL}	Low-level Input voltage		0.8		0.8	V
V_I	Input voltage	0	5.5	0	5.5	V
V_O	Output voltage	0	V_{CC}	0	V_{CC}	V
I_{OH}	High-level output current		−8		−8	mA
I_{OL}	Low-level output current		8		8	mA
Δt/Δv	Input Transition rise and fall rate		20		20	ns/V
T_A	Operating free-air temperature	−55	125	−40	125	°C

(1) All unused inputs of the device must be held at V_{CC} or GND for proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

6.4 Thermal Information

ψ_{JB}	Junction-to-board characterization parameter	50.8	56.9	47.0	32.3	44.2	53.3	12.9	40.4	72.7	
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	n/a	n/a	n/a	n/a	n/a	n/a	7.9	24.1	n/a	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.

6.5 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	V_{CC}	T_A = 25°C			SN54AHCT245 –55°C TO 125°C		SN74AHCT245 –40°C TO 85°C		Recommended SN74AHCT245 –40°C TO 125°C		UNIT
				MIN	TYP	MAX	MIN	MAX	MIN	MAX	MIN	MAX	
V_{OH}		I_{OH} = –50 μA	4.5 V	4.4	4.5		4.4		4.4		4.4		V
		I_{OH} = –8 mA		3.94			3.8		3.8		3.7		
V_{OL}		I_{OL} = 50 μA	4.5 V			0.1		0.1		0.1		0.1	V
		I_{OH} = 8 mA				0.36		0.44		0.44		0.44	
I_I	$\overline{OE}$ or DIR	V_I = 5.5 V or GND	0 to 5.5 V			±0.1		±1[1]		±1		±1	μA
I_{OZ}	A or B inputs[2]	V_O = V_{CC} or GND	5.5 V			±.25		±2.5		±2.5		±2.5	μA
I_{CC}		V_I = V_{CC} or GND, I_O = 0	5.5 V			4		40		40		40	μA
ΔI_{CC} [3]		One input at 3.4 V, Other inputs at V_{CC} or GND	5.5 V			1.35		1.5		1.5		1.5	mA
C_i	$\overline{OE}$ or DIR	V_I = V_{CC} or GND	5 V		2.5	10				10			pF
C_{io}	A or B inputs	V_I = V_{CC} or GND	5 V		4								pF

(1) On products compliant to MIL-PRF-38535, this parameter is not production tested at V_{CC} = 0 V.
(2) For I/O ports, the parameter I_{OZ} includes the input leakage current.
(3) This is the increase in supply current for each input at one of the specified TTL voltage levels, rather than 0 V or V_{CC}.

6.6 Switching Characteristics

over recommended operating free-air temperature range, V_{CC} = 5 V ± 0.5 V (unless otherwise noted) (see [1])

LOAD CIRCUIT FOR TOTEM-POLE OUTPUTS

LOAD CIRCUIT FOR 3-STATE AND OPEN-DRAIN OUTPUTS

VOLTAGE WAVEFORMS PULSE DURATION

VOLTAGE WAVEFORMS SETUP AND HOLD TIMES

VOLTAGE WAVEFORMS PROPAGATION DELAY TIMES INVERTING AND NONINVERTING OUTPUTS

VOLTAGE WAVEFORMS ENABLE AND DISABLE TIMES LOW- AND HIGH-LEVEL ENABLING

A. C_L includes probe and jig capacitance.
B.   Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.
     Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C.   All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z_O = 50 Ω, t_r ≤ 3 ns,
     t_f ≤ 3 ns.
D.   The outputs are measured one at a time with one input transition per measurement.
E.   All parameters and waveforms are not applicable to all devices.

8 Detailed Description

8.1 Overview

The SNx7ACHT245 octal bus transceivers are designed for asynchronous two-way communication between data buses. The control-function implementation minimizes external timing requirements. The SNx4AHCT245 devices allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending on the logic level at the direction–control (DIR) input. The output-enable ($\overline{OE}$) input can be used to disable the device so that the buses effectively are isolated. For the high-impedance state during power up or power down, $\overline{OE}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

8.2 Functional Block Diagram
Figure 8-1. Logic Diagram (Positive Logic)

8.3 Feature Description

- V_{CC} is optimized at 5 V
- Allows up voltage translation from 3.3 V to 5 V
  - Inputs Accept V_{IH} levels of 2 V
- Slow edge rates minimize output ringing

8.4 Device Functional Modes

Table 8-1. Function Table
(Each Transceiver)

INPUTS		OPERATION
$\overline{OE}$	DIR	
L	L	B data to A bus
L	H	A data to B bus
H	X	Isolation

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

The SN74AHCT245 is a low drive CMOS device that can be used for a multitude of bus interface type applications where output ringing is a concern. The low drive and slow edge rates will minimize overshoot and undershoot on the outputs. The input switching levels have been lowered to accommodate TTL inputs of 0.8 V V_{IL} and 2 V V_{IH}. This feature makes it ideal for translating up from 3.3 V to 5 V. The following figure shows this type of translation.
9.2 Typical Application

Figure 9-1. Typical Application Diagram

9.2.1 Design Requirements

This device uses CMOS technology and has a balanced output drive. Take care to avoid bus contention, because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions should be considered to prevent ringing.

9.2.2 Detailed Design Procedure

- Recommended input conditions:
  – Specified high and low levels. See (V_{IH} and V_{IL}) in the *Recommended Operating Conditions* table.
  – Specified high and low levels. See (V_{IH} and V_{IL}) in the *Recommended Operating Conditions* table.
  – Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid V_{CC}.
- Recommend output conditions:
  – Load currents should not exceed 25 mA per output and 50 mA total for the part.
  – Outputs should not be pulled above V_{CC}.

9.2.3 Application Curves

Figure 9-2. Typical Application Curve
10 Power Supply Recommendations

The power supply can be any voltage between the MIN and MAX supply voltage rating located in the *Recommended Operating Conditions* table.

Each VCC pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1 µf is recommended; if there are multiple VCC pins, then 0.01 µf or 0.022 µf is recommended for each power pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. A 0.1 µf and a 1 µf are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

11 Layout

11.1 Layout Guidelines

When using multiple-bit logic devices, inputs should never float.

In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Figure 11-1 specifies the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or V_{CC}, whichever makes more sense or is more convenient. It is generally acceptable to float outputs, unless the part is a transceiver. If the transceiver has an output enable pin, it will disable the output section of the part when asserted. This will not disable the input section of the I/Os, so they cannot float when disabled.
11.2 Layout Example

Figure 11-1. Layout Diagram

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

TI Glossary   This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
