SN74F543 OCTAL REGISTERED TRANSCEIVER WITH 3-STATE OUTPUTS

SDFS025B - D2942, MARCH 1987 - REVISED OCTOBER 1993

- 3-State True Outputs
- Back-to-Back Registers for Storage
- **Package Options Include Plastic Small-Outline and Shrink Small-Outline** Packages and Standard Plastic 300-mil DIPs

description

The SN74F543 octal transceiver contains two sets of D-type latches for temporary storage of data flowing in either direction. Separate latch-enable (LEAB or LEBA) and output enable (OEAB or OEBA) inputs are provided for each register to permit independent control in either direction of data flow. The A outputs are characterized to sink 24 mA while the B outputs are characterized to sink 64 mA.

LEBA 1 24 V _{CC} OEBA 2 23 CEBA A1 3 22 B1 A2 4 21 B2 A3 5 20 B3 A4 6 19 B4 A5 7 18 B5 A6 8 17 B6 A7 9 16 B7 A8 10 15 B8 CEAB 11 14 LEAB GND 12 13 OEAB	,	DB, DW, OR NT PACKAGE (TOP VIEW)											
	OEBA [A1 [A2 [A3 [A4 [A5 [A6 [A7 [A8 [CEAB [3 4 5 6 7 8 9 10 11	2 2 2 1 1 1 1 1	3 2 1 0 9 8 7 6 5	CEBA B1 B2 B3 B4 B5 B6 B7 B8 LEAB								

The A-to-B enable (CEAB) input must be low in order to enter data from A or to output data from B. Having CEAB low and LEAB low makes the A-to-B latches transparent; a subsequent low-to-high transition of LEAB puts the A latches in the storage mode. With CEAB and OEAB both low, the 3-state B outputs are active and reflect the data present at the output of the A latches. Data flow from B to A is similar, but requires using the CEBA, LEBA, and OEBA inputs.

The SN74F543 is available in TI's shrink small-outline package (DB), which provides the same I/O pin count and functionality of standard small-outline packages in less than half the printed-circuit-board area.

The SN74F543 is characterized for operation from 0°C to 70°C.

FUNCTION TABLET

[†] A-to-B data flow is shown; B-to-A flow control is the same except that it uses CEBA, LEBA, and OEBA.

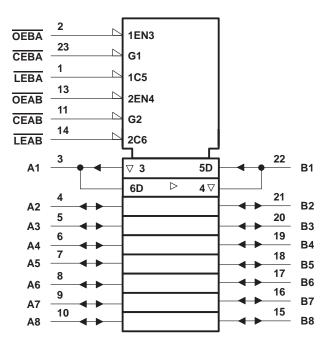

[‡] Output level before the indicated steady-state input conditions were established.

logic symbol[†]

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)

SN74F543 **OCTAL REGISTERED TRANSCEIVER** WITH 3-STATE OUTPUTS SDFS025B – D2942, MARCH 1987 – REVISED OCTOBER 1993

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V _{CC} – Input voltage range, V _I (excluding I/O ports) (see Note 1) – Input current range, I _{IK} – –30 Voltage range applied to any output in the disabled or power-off state – –0. Voltage range applied to any output in the high state – –0.	1.2 V to 7 V mA to 5 mA 5 V to 5.5 V 0.5 V to V _{CC}
Current into any output in the low state: A1–A8	
Operating free-air temperature range	0°C to 70°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input-voltage ratings may be exceeded provided the input-current ratings are observed.

recommended operating conditions

			MIN	NOM	MAX	UNIT
VCC	Supply voltage		4.5	5	5.5	V
VIH	High-level input voltage	2			V

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
